

XXII Symposium of Cryptogamic Botany

Lisboa, Portugal

24- 26 July

2019

global change ecology

extreme environments

technological developments

conservation ecology

systematics & evolution

physiology and ecophysiology

ecology in the tropics

urban areas ecology

Please **save the date**. The **XXII Symposium of Cryptogamic Botany** will take place in Lisbon from the 24th to 26th of July 2019. This biennial symposium will gather experts on fungi, algae, lichens, bryophytes and ferns to discuss up-to-date science on cryptogamic systematics, physiology and ecophysiology, application and technology, and urban, tropical and global change ecology. We strongly encourage the participation of those working in cryptogamic botany, including researchers and university students, private and public practitioners, to promote the exchange of technical and scientific knowledge in this area.

The Symposium will be organized back to back with the 15th European Ecological Federation (EEF) Congress that will take place the following week. The Symposium is organized by the University of Lisbon, Faculty of Sciences, Centre for Ecology, Evolution and Environmental Changes.

You can contact us at cripto2019@fc.ul.pt. More information, including dates and registration, will be provided at <http://criptogamica2019.rd.ciencias.ulisboa.pt>. We hope to see you in Lisbon!

The organizing committee

Paula Matos | Crstina Branquinho | Pedro Pinho
